Naikan introspection therapy is a
wonderful way to get back in touch with
yourself

□ IRM

FREE lifetime membership to the IRM –
Ibogaine Recovery Movement online
meetings and recovery community

“Look, I know you think I have a coke problem but I do not. I
can quit any time I run out.”
~ Keith Buckley, Scale

Iboga is as effective in interrupting
stimulant addiction as it is with
opioids.

Our approach to cocaine/crack is to
combat the aggressive nature of the
addiction and its effects on the
nervous system by a mixture of holistic
treatments and iboga.

While the half-life of crack and cocaine
is only a few days, the long-term
effects of these stimulants on the
nervous system is deep and long-
lasting.

Users often find long-term use
adversely affects their brain, heart,
intestines, kidneys, even their sexual
function.

Both Ibogaine and cocaine/crack
cocaine are heart rate accelerators.
Our medical procedure requires
abstinence from stimulant use for 7
days prior to the treatment
commencing.

This restriction applies equally to
methamphetamine, ephedra, Ritalin,
Vyvanse, Adderal and other ADHD
prescriptions.

As part of a rigorous medical check, a
urine test will be carried out on arrival
at the retreat to ensure that a 72 hour
break with stimulant use has been
followed.

For a bright future, a new beginning, a
return to your authentic playful self,
ibogaine therapy is the way.
